BHAVISH TREHAN

Aspiring Generative AI Engineer | LLM Apps, RAG & Multi-Agent Systems

bhavish.trehan.s.135@kalvium.community | LinkedIn | GitHub | Portfolio

Rohtak, Haryana | Open to relocation and remote

PERSONAL STATEMENT

Generative AI engineer (**Python, Google Gemini, RAG**) building production-style LLM systems, including a **5-agent Gemini pipeline** with embeddings, MongoDB Atlas Vector Search, reranking and confidence-based human escalation. Backed by internship experience shipping REST APIs, JWT/RBAC authentication and Docker deployments. Seeking a GenAI internship.

TECHNICAL SKILLS

Languages · Python (Advanced), JavaScript (Intermediate), C++ (Intermediate)

Frontend · React.js, Next.js, Vite, Tailwind CSS

Backend & APIs · Node.js, Express.js, REST APIs, JWT Authentication, RBAC, Multer, pdf-parse

Databases · MongoDB Atlas Vector Search, MongoDB, Mongoose, MySQL, Prisma ORM

Tools / AI · Google Gemini API, RAG, Embeddings, Multi-Agent Orchestration, Prompt Engineering, Query Rewriting & Reranking, Docker, Git, GitHub Actions, Jest

INTERNSHIP

Pixorama | Jun 2026 – Aug 2026

Software Development Intern | Real-world full-stack delivery

- Built and deployed **2 full-stack web apps** used by real users with React.js, Node.js, Express.js and MongoDB, working from API design to production.
- Engineered **validated REST APIs and JWT authentication** flows; debugged auth and CRUD workflows to strengthen data integrity and reliability.
- Containerized apps with **Docker** and deployed them on Linux; collaborated with engineering mentors to ship features.

PROJECTS

ResolveAI: AI-Powered IT Incident & Support Platform Live Demo · GitHub · 2026

- Built a full-stack **GenAI platform** that automates IT incident triage, root-cause diagnosis and resolution planning, with human-in-the-loop escalation for low-confidence cases.
- Designed a sequential **5-agent pipeline** (Triage, Retrieval, Diagnosis, Resolution, Escalation) on Google Gemini with runtime-validated JSON outputs and a configurable confidence threshold.
- Implemented **RAG**: PDF SOP ingestion, chunking, Gemini embeddings, MongoDB Atlas Vector Search (cosine similarity), query rewriting and reranking to keep resolutions grounded.
- Built the product layer: JWT/bcrypt authentication, 3-role RBAC, admin telemetry dashboard and Jest/Supertest backend tests.

boAt Warranty Hub: Full-Stack Warranty Platform GitHub · Jul 2026 – Present

- Built a warranty platform with serial-number verification, repair history and an RBAC-protected admin dashboard (Next.js, MySQL, Prisma).
- Secured documents with **Google Cloud Storage signed URLs** and NextAuth.js / JWT / bcrypt authentication; set up Docker and GitHub Actions CI/CD, deployed on Vercel.

ACADEMIC PROFILE

B.Tech, Software Product Engineering, Kalvium × SGT University, Gurugram · 2025 – 2029

CGPA: 9.50 / 10.00 · Semester 1: 91.5% · Semester 2: 100%

Class XII, CBSE · 76.8% | 2025

Class X, CBSE · 77.6% | 2023

CERTIFICATIONS & ACHIEVEMENTS

- Kalvium Dojo Belt Levels: Python (Advanced), JavaScript (Intermediate), C++ (Intermediate)
- Experience & Reference Letter, Pixorama, 2026 (view letter)
- Maintains a public GitHub portfolio of full-stack and Generative AI projects: authentication systems, multi-agent AI and RAG apps.

EXTRA-CURRICULAR ACTIVITIES

- Practices data structures and algorithms through consistent, hands-on problem solving.
